Evidence Based Interventions (EBIs)

Though they have their first roots in Intervention Assistance Teams in decades past, Evidence Based Interventions (EBI) are part of progressing scientific research-based form of education. In the past, practices were implemented to address an issue without regard for the effectiveness of the practice. A cycle of improvement practice and identifying resource inequities within the system were not part of the school improvement.

Where Does This Fall in the Cycle?

Before you start diving deep into the [Menus of Best Practices & Strategies](#) or [What Works Clearinghouse](#), you need to discover where you are really at.

Diving into the root of your issues identified in your resource inequities coupled with stakeholders and district/school plans is a necessary step prior to effectively choosing an EBI. Use the following flow chart to identify the right EBI for school use.
